

Matrix42 Asset Management

Asset Management made easy

Your inventory of hardware, software, mobile devices, SIM cards, peripheral devices, network devices and other assets is constantly changing. If you don't have full transparency over the life cycle of all these assets, you'll have a hard time determining which assets are new, which warranties are about to expire, and which systems are nearing the end of their useful life. This lack of insight can lead to poor procurement decisions, wasted time, as well as higher costs and business risks.

Matrix42 Asset Management consolidates all the data about your IT assets into one user-friendly, Web-based system. This gives you full, permanent, self-service control of your asset inventory at your fingertips. Your benefits: Optimized costs, lower risk and higher productivity.

Why use Matrix42 Asset Management?

1

It saves your organization time and money

Keeping tabs on assets manually takes a lot of time that costs your organization money, even before you take into account the avoidable asset loss or license compliance failures that could result.

2

It's essential for successful license compliance

Good asset management is the foundation of successful license management. Without it, a lack of control, audit failures and wasted budgets are almost guaranteed.

3

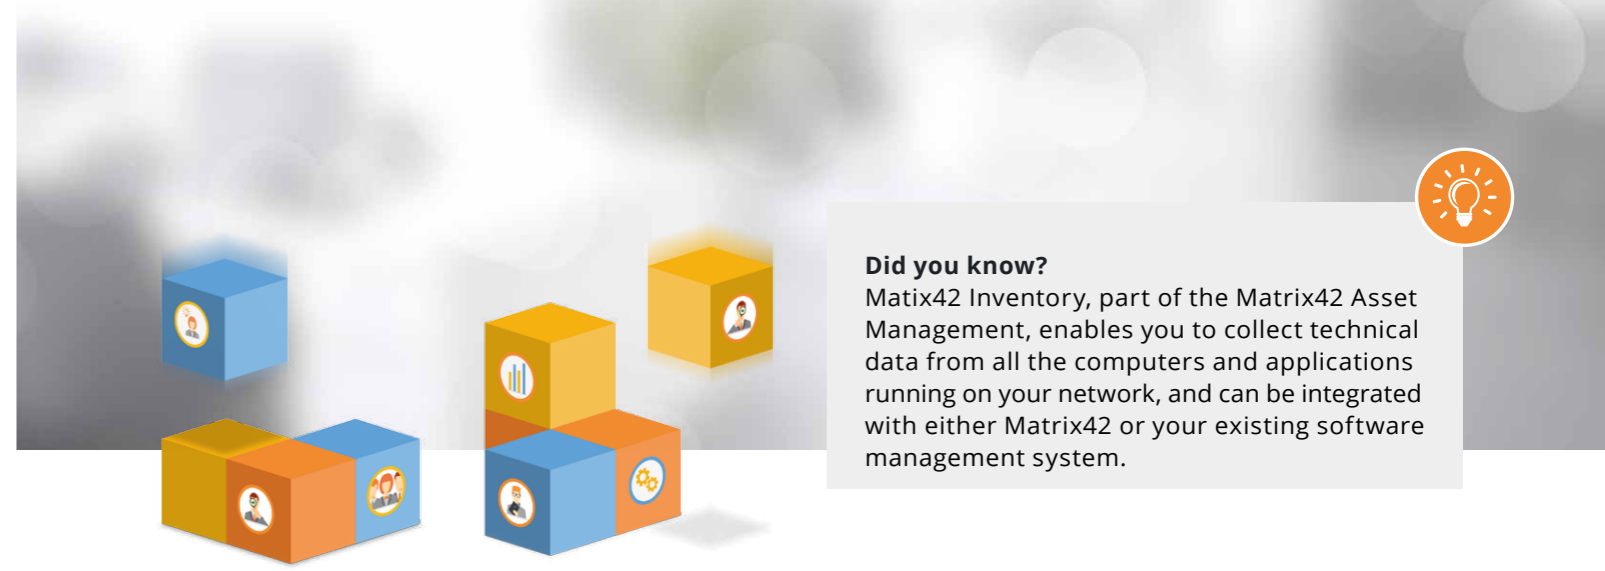

Your IT resources can be used more productively

Organizations increasingly expect IT departments to generate value rather than just costs. That can't happen if IT professionals are spending time using manual systems and processes trying to establish control over diverse assets, spread over multiple locations.

Key Features

- Full asset life cycle management and control.
- A consolidated view of your asset inventory for 100% asset transparency.
- Detailed data on every device on your network, from PCs to peripherals, including all installed software, configurations or device specifications.
- Easy integration with Matrix42 Workspace Compliance and other workspace management modules for simple task automation.
- Quick view of system hardware and software via integration with your help desk system.

Did you know?

Matrix42 Inventory, part of the Matrix42 Asset Management, enables you to collect technical data from all the computers and applications running on your network, and can be integrated with either Matrix42 or your existing software management system.

Matrix42 Asset Management

Achievement of asset transparency

An organization wants a complete picture of the assets it owns.

Matrix42 Asset Management:

- integrates asset information from across locations, departments, cost centers and employees.
- integrates complete organizational structure data, including how legal entities relate to one another.
- provides visibility not just over individual end user equipment, but also data center assets including physical and virtual servers, and the applications being run on them.

Avoidance of unnecessary costs

A leasing contract for laptop computers is about to expire, requiring its extension or the return of the hardware.

Matrix42 Asset Management

- reveals the location and user/person responsible for each laptop.
- determines usage status – in use, broken, missing, etc.
- provides information about required actions regarding licenses associated with the laptop, depending on whether it is to be returned or retained.

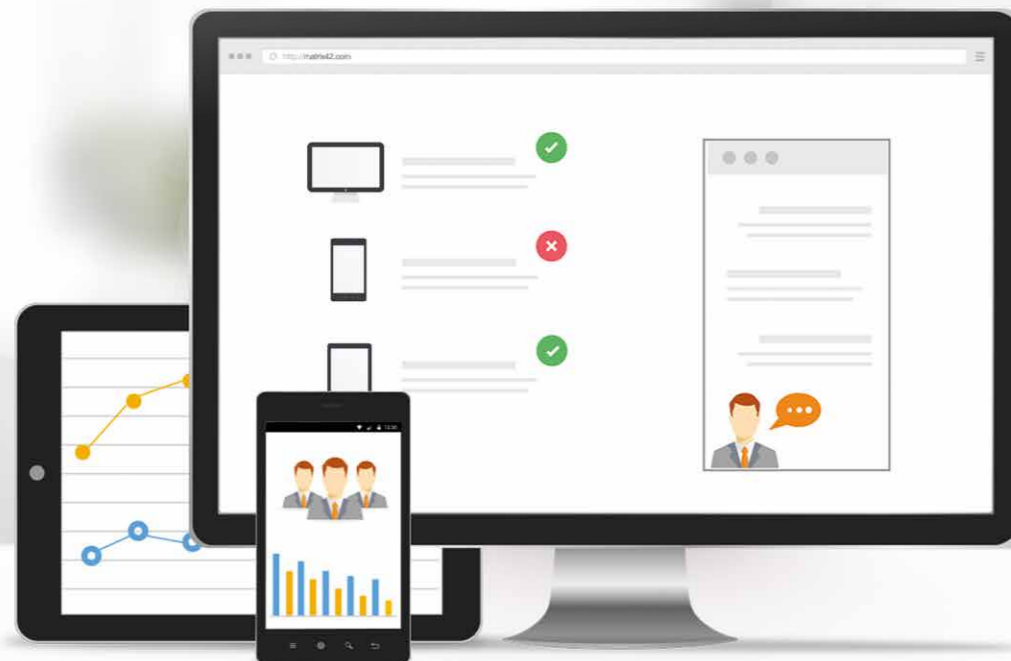

License compliance accounting

A license administrator wants to ensure full license compliance.

Matrix42 Asset Management

- provides the accurate asset and master data required.
- enables transparency over the entire life cycle of each asset, from order to retirement.
- reveals any gaps or inconsistencies that can then be investigated in advance of license audits or important renewal dates.

Key Benefits

1

Complete asset transparency

- Simplified management of all your computers, software, mobile devices, SIM cards, peripheral devices, network devices and more within a single Web-based management environment.
- Easy identification and allocation of assets through centralized inventory.
- Better 'repair, replace or renew' decision-making through tracking of whether assets are in use, missing or broken.
- Significantly increased chances of warding off audits.
- Faster resolution of problems with built-in collaboration tools that ensure important asset information is not lost.

2

Higher IT productivity

- Standardization and automation of many labor-intensive asset management tasks.
- Automatic assignment of assets to users for accurate records and improved quality of service.
- The Import wizard saves hours in locating asset information and reconciling it with inventory.
- Detailed reporting on assets, where they are and who is using them – all at the click of a button.
- Straightforward integration with other Asset Management tools.
- More IT resources to use on value-creation projects.

3

Lower business risk

- Easy access to a complete set of asset information for you and your finance team.
- Lower costs through the avoidance of unnecessary purchases and audits, and lower likelihood of losing track of assets.
- Improved procurement decision-making through fast, easy asset reconciliation.
